Auto Ticket Classification using FLOW DESIGNER

Brainstorming & Ideation Phase

Team Leader: K. Prasanna | Members: R. Nithisa Shirin, S. Nigmatha Nisha, Misha Nandhini N.

• Purpose: understand the school IT helpdesk problem and explore solutions.

• Problem: manual Category/Subcategory selection takes time and can be inconsistent.

• Ideas: manual triage; caller-selected dropdowns; keyword-based Auto-Classification using Flow Designer; ML/NLP; third-party chatbot.

• Evaluation criteria: cost, complexity, maintainability, scalability and deployment time.

• Selected approach: Keyword-Based Auto-Classification using Flow Designer.

Auto Ticket Classification using FLOW DESIGNER

Brainstorming & Ideation Phase – Continued

• Scope: automatic Category/Subcategory classification, custom ticket table, dependent choices, confirmation email and four issue types.

• Four issue types: Wi-Fi/Network, Projector/Hardware, Password/Login (Access), Slow/Hanging (Performance).

• Out of scope: ML/NLP, multilingual detection, automatic technician assignment, SLA escalation and chatbot intake.

• Stakeholders: Students/Teachers, IT Agents, IT Administrators and School Management.

• Risks: unusual wording, spelling variations and unmatched descriptions.

• Success: correct classification, email confirmation, reduced manual triage and easy keyword updates.

• Outcome: agreed no-code Flow Designer solution.
