Auto Ticket Classification using FLOW DESIGNER

Project Design Phase

Team Leader: K. Prasanna | Members: R. Nithisa Shirin, S. Nigmatha Nisha, Misha Nandhini N.

• Purpose: define the ticket classification structure and flow.

• Workflow: Caller input → ticket record → Flow Designer trigger → keyword checks → Category/Subcategory update → email.

• Components: custom ticket table, Caller, Category, Subcategory, Short Description, Description, State, Assigned Group, Assigned To, Flow Designer and email.

• Keyword flow checks Wi-Fi, Projector, Password and Slow/Hanging conditions.

Auto Ticket Classification using FLOW DESIGNER

Project Design Phase – Continued

• Dependent choice design keeps Subcategory values consistent with Category.

• Flow logic evaluates predefined keywords and updates the record.

• Fallback: unmatched tickets remain available for manual review.

• Validation: test every known issue type, final fields and notification.

• Outcome: complete design from ticket submission to classification and confirmation.
