# Auto Ticket Classification using FLOW DESIGNER

## Project Development Phase

Team Leader: K. Prasanna | Members: R. Nithisa Shirin, S. Nigmatha Nisha, Misha Nandhini N.

• Purpose: implement the ticket table, fields, Flow Designer and notification.

• Configure custom ticket table with Caller, Category, Subcategory, Short Description, Description, State, Assigned Group and Assigned To.

• Configure dependent Category/Subcategory choices.

• Create Flow Designer trigger and actions.

• Add keyword conditions for Wi-Fi, Projector, Password and Slow/Hanging.

# Auto Ticket Classification using FLOW DESIGNER

## Project Development Phase – Continued

• Update Category and Subcategory when a keyword matches.

• Keep unmatched tickets available for manual handling.

• Configure automated confirmation email to caller.

• Create sample tickets and verify flow execution, fields and email.

• Collect actual configuration/output evidence or frames from the recording.

• Outcome: working automation ready for testing.
