Auto Ticket Classification using FLOW DESIGNER

Project Testing Phase

Team Leader: K. Prasanna | Members: R. Nithisa Shirin, S. Nigmatha Nisha, Misha Nandhini N.

• Purpose: verify automatic classification and notification.

• Test strategy: positive cases for all four issue types and an unmatched description.

• Wi-Fi test: expected Network classification.

• Projector test: expected Hardware classification.

• Password test: expected Login/Access classification.

• Slow test: expected Performance classification.

Auto Ticket Classification using FLOW DESIGNER

Project Testing Phase – Continued

• Unmatched test: no configured keyword; manual handling remains possible.

• Notification test: confirm caller receives automated email.

• Defect handling: record mismatch, review trigger/conditions/fields/email, correct and retest.

• Evidence: actual screenshots or recording frames.

• Test summary should contain actual passed/failed/retested counts.

• Outcome: testing verifies requirements.
