Auto Ticket Classification using FLOW DESIGNER

Project Documentation Phase

Team Leader: K. Prasanna | Members: R. Nithisa Shirin, S. Nigmatha Nisha, Misha Nandhini N.

• Purpose: create a complete phase-wise project record.

• Structure: title/team, problem, ideation, requirements, design, planning, development, testing, conclusion and references.

• Implementation documentation: table, fields, Flow Designer trigger/actions, keyword logic and notification.

• Evidence: configuration, flow, conditions, sample tickets, output and email.

Auto Ticket Classification using FLOW DESIGNER

Project Documentation Phase – Continued

• Results: record actual test results and final classification values.

• Conclusion: explain how Flow Designer reduces manual classification.

• Future enhancements: more keywords/categories, spelling handling, multilingual detection, ML/NLP, auto-assignment and SLA automation.

• References: ServiceNow documentation, SmartBridge project/reference material and actual project configuration.

• Outcome: complete documentation for evaluation.
